Intentions to Raise Turkeys, 1972--20 States
Breeder Hens on Farms and Value, December 1, 1969-71--26 States
Turkeys Raised, 1970-71--All States
Turkeys on Farms and Value, January 1, 1970-71--All States

TURKEYS RAISED INTENTIONS:

Turkey growers in 20 States intend to raise 1 percent more turkeys in 1972, according to the Crop Reporting Board. An increase of 5 percent is intended for light breeds while the increase in heavy breeds is indicated to be 1 percent. If producers carry out present intentions, the 1972 turkey crop in the 20 States would total 116.6 million birds compared with 115.0 million raised in 1971. Producers in the 20 States intend to raise 102.9 million heavy breed turkeys in 1972 and 13.8 million light breeds.

The number of turkeys actually raised in 1972 may vary somewhat from the 1972 intentions of growers. Such changes may depend on reactions to this report, price of feed, supply and price of hatching eggs and poults, and prices received for turkeys during the next few months.

TURKEY BREEDER HENS:

Turkey breeder hens on farms December 1, 1971 in 26 States totaled 3,375,000; 1 percent less than on January 1, 1971. The number of breeder hens on farms consisted of 3,001,000 heavy breeds and 374,000 light breeds. The number of heavy breeds was virtually unchanged from January 1, 1971 and the number of light breed hens was 5 percent smaller.

The December 1, 1971 value of breeder hens on farms totaled \$20,964,000 compared with \$20,217,000 on January 1, 1971. The average value per bird was \$6.21 on December 1, 1971 compared with \$5.94 on January 1, 1971.

Heavy breed turkeys tested for pullorum disease July through November 1971 in the United States was 16 percent below the same period a year earlier. Light breed testings for the same period were down 22 percent.

The following changes in the turkey estimating program announced in October 1971 are effective with this report:

1. The date of the turkey inventory estimates is changed from January 1 to December 1. The estimate for "total turkeys" has been discontinued beginning with December 1971 and estimates of breeder hens for 26 States with 10,000 or more breeder hens are provided. Estimates of breeder hens in the remaining States have been discontinued.

Revised turkey inventory and value estimates for January 1, 1970 and 1971 are shown on pages 6 and 7. For historic relationships, the January 1 series of breeder hen estimates can be compared with the December 1 estimates since breeder hen inventories reflect the number producing eggs during the season.

2. Intentions to raise turkeys are provided for 20 important States. Intentions estimates for other States have been discontinued. The August report of Turkeys Raised and the Production, Disposition and Income reports will provide estimates of turkeys raised for all States and the United States.
